BOOK SYNOPSIS

There are ten thousand Athletic Training students enrolled annually (NATA, 2005). We currently have no market share. There is an identified need for the material proposed here. It has reviewed very positively with strong indications for great adoption potential. This product complements, rather than replaces, the primary text in use. Chief complaints about that text are the lack of a lab manual, video footage and color photos, all provided here. For these reasons, it is proposed that this should reach about twenty percent of the market. Projected quantities are in line with other Athletic Training texts funded in the recent past and currently in development. Because the DVD has incredible usefulness as an ongoing resource for working Athletic Trainers, and because it is only available packaged with a consumable Lab Manual, there is likely to be little attrition for the product, though some attrition has been projected.
